Fellow Chartered Institute of Building (Ambassador and Past Centre Chairman)

Fellow Chartered Quality Institute

Chartered Quality Professional

Affiliate Institution of Occupational Safety and Health

RSW Partnership; a Chartered professional consultancy practice; has worked extensively in the building and construction sector for some 30 years being located in the United Kingdom and Sri Lanka.

RSW Partnership “with a full design, engineering and project management commission” has delivered “flagship projects” from inception to final handover in the private and public sectors. A sample of these public and private sector projects can be viewed on the web site www.rswpartnership.co.uk

RSW Partnership capability extends through the built environment, quality (BSI first BS 5750 / ISO 9001), safety and process systems management and the services it has provided can be viewed on the opposite page.

RSW Partnership has delivered complex “flag ship” projects which encompassed significant mechanical, electrical and process services and innovative design solutions.

RSW Partnership was awarded these major programmes of work from being able to demonstrate programme delivery skills, industry knowledge and leadership; that being to listen to other viewpoints whilst achieving timelines.

Services

executive management; strategy and evaluation

Confidentially initiate and set the scene through a quality system process of programme evaluation to meet the strategic need whilst developing the business plan, specifications, timelines and key stakeholders and statutory and regulatory authority's relationships through a developing feasibility study.

quality and environmental management; systems and working practice

Ensure the corporate and specific quality and environmental processes deliver corporate commitments and achieve statutory obligations

policy definition; preparation and implementation

Ensure compliance with necessary Corporate Policy's and where necessary advise on deficiencies and make recommendations to change thereby providing footprints for project initiation

health and safety

Ensure all health and safety process are structured, current and available and can be transposed through the supply chain, monitored and validated.

risk management

Set up a process to identify, interrogate and mitigate risk; integrated with the corporate structure of risk management; ensuring ongoing due governance and programme adherence

programme and project management; control and delivery

through the project executive and with the appointed delivery team, using the interrogated feasibility study, set to work electronic quality system processes for information preparation, transfer and iteration development for reporting and approval

cost management; budgeting and monitoring

prepare the projects financial plan in compliance with the business plan and developed feasibility study, set budgets and define control and monitoring processes

design solutions; best practice and sustainability

prepare, develop and control the design and engineering brief and using the appropriate contractual form(s) prepare such documentation as necessary to commence works on site.

building contract control and site control

Ensure such control systems are in place to deliver the build programme and meet planned quality and accident free site expectations
